

SIGHTLINE EDM™

Monitor. Analyze. Optimize.

Gain the insight you need to optimize IT performance, reduce operational issues and automate capacity planning with Enterprise Data Management, (EDM™) by Sightline Systems. EDM is specifically designed to provide today's busy business leaders with the real-time data they need to make smarter, more cost effective decisions, and reduce down time.

EDM provides IT teams with a single, simple and yet powerful view into every part of a company's infrastructure from mainframes to the latest in Windows and Linux systems. EDM is scalable to the size of any business, capable of monitoring hundreds to thousands of infrastructure components with over 7,500 points of collected data. Not only does it allow teams to better manage that infrastructure, it allows them to replace multiple single-system monitoring tools with a single solution that can monitor every component within that infrastructure. EDM will help you and your team:

Monitor Hardware Systems

- Proactively monitor systems and infrastructure by scouring thousands of data points to identify issues and help prevent problems before they start
- Reduce costs by replacing multiple monitoring tools with one single solution and finding ghost servers that can be repurposed
- Supervise servers, cloud providers, split infrastructures, applications, databases, .net, web services and messaging

Analyze Trends

- Eliminate waste by underscoring trends, data and patterns that are affecting efficiency
- Find the needle in the haystack by performing root-cause, multi-system analysis

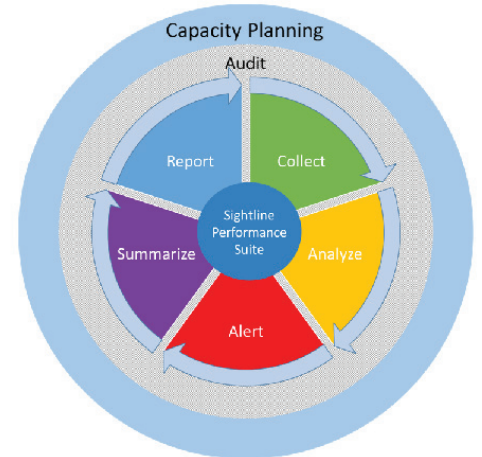

Optimize Performance

- Blend performance, measurement and compliance
- Forecast future behavior easily with web-based Self Service reports and Quick Charts

EDM Includes Business Software Monitoring

Including: JAVA, JBoss, IBM websphere, .net, Amazon Cloud Watch, Biztalk, exchange, IIS, SQL, Oracle, netApp and others.

PRODUCT OVERVIEW

BENEFITS

Cost reduction - Anticipate, delay or avoid capital IT costs in the data center by finding underutilized resources

Manage cloud providers - See actual utilization levels and match to invoices

Manage risk - Alerting functions allow for early detection of unusual activity

Real-time and over-time solution

RCA - Reduce internal costs of finding problems in the data center

Compliance - Only EDM has ACE built in compliance analysis functionality for audit's in regulated industries

Platform agnostic - Any server, any time - not just the popular ones

F500 input - Benefit from features developed for major clients, now part of our standard solution

Efficient - Lower server overhead and utilization

FEATURES

Support for *AIX, Linux, Solaris, VMware, Windows, mainframes and more* operating systems

Fully API enabled

Compatible with all modern web browsers

Easy-to-use dashboards with drill-down detail

Reports automatically sent via email - Choose from standard or custom reports

Customize alert thresholds to provide real-time notifications of potential issues via email, snmp trap, command execution, custom alerting, or even play sound statements with expression builder

Analyze more than 7,500 data points

Role-based security

SDK available

Applications monitor

Multi-vendor hardware support.

Customize views by user

U.S.-based live support

The EDM Difference

The EDM platform is wholly customizable. The dashboards, the data collection tools and all of the reports can be customized to meet your needs.

A Unique Trio of Plug-Ins Make EDM Powerful

Power Agents collect incredible amounts of data and offer service to more than 50 different technologies and platforms. Three unique plug-ins enhance EDM capabilities: Clairvor, ForSight, and ACE. This trio of add-on modules are designed to work together with the power agents to give you maximum control to monitor systems, analyze trends and optimize performance.

- **Clairvor** - This module delivers an enterprise-grade root-cause analysis. It automates the investigation of service issues from multiple data sources and integrates all of the necessary information to diagnose issues into one central dashboard.
- **ForSight** - This module will help your team automate capacity planning by leveraging real-time reports including forecasting of when capacity will be exceeded. No modeling is required.
- **ACE** - This module will help you enforce compliance and security policies. Discover, detect and audit thousands of out-of-the-box security and operational policies or create your own with the policy engine.

Learn More

Today, many Fortune 500 and Global 2000 companies in energy, finance, manufacturing, retail, telecommunications and travel industries as well as many government agencies rely on EDM to proactively gauge performance and prevent costly downtime.

Join the tens of thousands of servers currently being monitored by Sightline Systems. Visit www.sightline.com or contact us today at sales@sightlinesystems.com and (703) 563-3000 to learn more about how EDM can you monitor systems, analyze trends and optimize performance.

SIGHTLINE SYSTEMS

Sightline Systems offers a real-time operations intelligence solution focused on analytics, root-cause analysis, performance management, correlation of data and predictive analysis from any source — critical IT systems including mainframes, applications, storage, databases — down to the process level. For more than 12 years, Sightline reports a 95% renewal rate from customers that include Fortune 500 and Global 2000 companies in finance, telecommunications, travel, retail as well as federal, state and local government.
